

As you may have noticed during your last login, NetSuite has announced their 2018.1 release dates.

You can find the **New Release** portlet on your Home Dashboard. If you do not see this it's possible that it may have been closed since NetSuite first added it for you (if you do not see this, please find the instructions in the document "NetSuite New Release Facts 2018.1" below on how to add it back). Also attached is an overview of all resources available to you including how to access 2018.1 New Feature Training Videos.

Section	Key Changes Summary
Accounting – Deferred Expense Waterfall Report	New Deferred Expense Waterfall report > available with Amortization or the Advanced Revenue Management feature enabled Detail report > reconciles the deferred expense account balance on the balance sheet, provides a forecast of the expense stream
Accounting – Advanced Revenue Management	Usability Enhancements for Advanced Revenue Management > negative revenue elements included in revenue arrangements from sales transactions can now be allocated, new accounting preferences, new searches, new fields
Accounting	GL Audit Numbering feature > can apply gapless numbering sequences to all GL posting transactions to meet international compliance requirements.
	Foreign Currency Variance Posting Rules > new fields, custom fields and segments available, can copy posting rules to create new rule, can assign priority rules
	Print Multiple Journal Entries Using Advanced PDF/HTML Templates
	Custom GL Lines Plug-in Enhancements > System notes are now logged
	Custom GL Lines can Use Same Account on Transaction main Line
Administration	Sandbox Changes in North America > Sandbox accounts on NetSuite domain, ability to easily switch between roles in production and sandbox accounts, zero downtime during refresh
	Two-Factor Authentication Required for Administrator role and Full Access roles in newly provisioned accounts.
	SAML Single Sign-on Improvements > ability to build trust between a singled IdP and multiple NetSuite accounts, can define a role for SAML login through SSO
	New Change Role Option > ability to change to role with adequate permissions at permission violation error message
Banking	Bank Statement Imports > ability to import a bank or credit card statement file in CSV format with UTF-8 encoding, new visual indicators to show which accounts require reconciliation
	Ability to Delete Reconciled Statements
